

KSE-1060

Tandem Mounting Kit Direct Head Mount

KSE's new Direct Head Mount Kit was designed to simplify Tandem Pump mounting for crate motor applications requiring "front engine installation" (i.e. IMCA A-Mods). This Direct Head Mount Kit also works with many SBC applications with heads that have provisions for auxiliary 3-bolt mounting. Manufactured from high quality, billet aluminum with lightweight profiling and anodized finish - the new design helps simplify pump installation while providing improved location and pulley/drive kit spacing. Updated location requires longer 840mm HTD belt (KSM1058-840) which is included in the new Crate Single Belt Drive Kit (KSD1026).

Product Features & Benefits

- Clean & Simple Tandem Pump Installation
- For 604 Crate Motor & SBC Applications*
- Perfect For IMCA A-Modifieds or Similar
- Improved Pump Location & Drive Kit Spacing
- Manufactured From Lightweight, Billet Aluminum
- See Updated 840mm Belt Length Requirements
- 100% Manufactured & Built In The USA
